

Company Overview

ONEPAK, Inc. is an environmental logistics technology company, uniquely specializing in the new regulatory-driven niche of “e-waste” collection and logistics.

The Company has developed a patent-pending business process for managing and tracking nationwide packing and transportation of used computers and other electronics for reuse and recycling.

ONEPAK’s primary clients are computer and electronics manufacturers, leasing companies, recyclers, and logistics providers. The Company’s cleantech logistics services and technologies help businesses comply with new “green” regulatory mandates affecting the safe handling and ecological disposal of obsolete electronics.

The Company has set the highest standard in the reverse logistics industry for inventory tracking during the I.T. asset collection process, developing proprietary software to capture asset data onsite, and reporting it online.

The Challenge: Visibility into I.T. Asset Collection

When used electronics are collected at the end-of-lease or end-of-life, there is often little visibility or accountability in the process. Hand-written data gathered onsite is not legible, accurate, nor accessible online.

ONEPAK’s logistics technology solves this industry problem.

CERTIFIEDSM Logistics Solution

Just as recyclers issue a Certificate of Destruction, **ONEPAK** is the only provider in the industry to issue a **Certificate of Collection** to verify a recycler’s audit and settlement statements.

The **Certificate of Collection**, a key component of ONEPAK’s CERTIFIED Logistics solution, documents the entire process end-to-end, from pickup, to cross-dock and delivery, trackable online at the asset and pallet levels.

ONEPAK’s CERTIFIED Logistics:

- Trains every crew.
- Validates every asset.
- Documents every pallet.
- Tracks every pickup, cross-dock and delivery.

Leading the Pack

ONEPAK has raised the bar for visibility and accountability in the I.T. asset collection field through proprietary logistics technology. No other logistics technology company is pushing the industry farther faster.
